

Prerequisites

1. Node with version greater than 18
2. VS Code (or any similar IDE)

Steps:

1. Unzip/clone the project(sauceDemo) folder to your local machine
2. Open terminal from location where the wdio.conf.js file resides and run '**npm install**' (to install the dependencies from package.json)
3. Then run '**npm run regression**' – this will start the execution and generate the report
4. Go to '\reports\html' folder and open 'index.html'
